Art Unit: 1651

The application should be reviewed for errors.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claim 1 drawn to a genus within Actinomycetales, having certain properties, classified in Class 435, subclass 252.1, for example.

II. Claims 2-7 drawn to a process of producing biomolecules using a strain having certain properties, classified in Class 435, subclass 41+ depending on the biomolecules produced.

III. Claims 8-12 drawn to a process of drug discovery using a strain having certain properties, classified in Class 435, subclass 34, for example.

Inventions I and II/III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as for each of the processes claimed and in addition the microorganisms cells can be used in a process for obtaining antibodies or as host cells in processes involving the use of recombinant DNA or for the production of single cell protein for nutritional supplementation, none of which processes require the production of biomolecules, for example.

Each of groups II and III is directed to separate and distinct inventions. The method of Group II is directed to a conventional process by culturing cells to produce a product, and Group III is directed to a process of drug discovery. These methods are distinct both physically and functionally, require different process steps and produce different products.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of Group I would not necessarily anticipate or make obvious the any of the other groups.

For these reasons restriction for examination purposes is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1651

application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Irene Marx whose telephone number is (703) 308-2922. The examiner can normally be reached on Monday through Friday from 6:30 AM to 3:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Wityshyn, can be reached on (703) 308-4743. The appropriate fax phone number for the organization where this application or proceeding is assigned is before final (703) 872-9306 and after final, (703) 872-9307.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to Customer Service whose telephone number is (703) 308-0198 or the receptionist whose telephone number is (703) 308-1235.
